10 MPa double acting hydraulic cylinders with dimensions conforming to ISO standard

- Double acting hydraulic cylinders for 10 MPa with bores from 32 mm to 125 mm.
- Conforming to ISO 10762/JIS B8367-5 standard.
- The adoption of floating cushion realizes smooth startup.
- High-performance cushion provided as a standard feature.
- Seals in sliding parts conform to ISO standards for seal groove.

Standard Specifications

Type	Standard type, Switch Set
Nominal pressure	10 MPa
Maximum allowable pressure	Styles other than TC : 10 MPa TC style : 10 MPa (ϕ63 or less), 7 MPa (ϕ80 or more)
Proof test pressure	15 MPa
Minimum operating pressure	Cap side : 0.3 MPa or less Rod side : 0.45 MPa or less
Working speed range	ϕ32 to 63 : 8 to 400mm/s ϕ80 to 125 : 8 to 300mm/s
Working temperature range (ambient temperature)	Standard type : −10 to +80℃ Switch Set AX type : −10 to +60℃ WR/WS type : −10 to +70℃ (No freezing)
Structure of cushioning	Metal fitting system
Adaptable fluid	Petroleum-based fluid (When using another fluid, refer to the table of fluid adaptability.)
Tolerance for thread	JIS 6g/6H
Tolerance of stroke	0 to 250 mm $^{+1.0}_{0}$ 251 to 1000mm $^{+1.4}_{0}$ 1001 to 2000mm $^{+1.8}_{0}$
Mounting style	SD·FA·FB·EA·EB·LA·CA·CB·TA·TC
Accessories	● Rod eye (T-end) ● Rod clevis (Y-end) with pin ● Lock nut ● Boots : Nylon tarpaulin : Chloroprene : Conex

- The maximum allowable pressures for the TC style are applicable when load is applied to only one side with the TC positioned in the center.

Terminologies

Nominal pressure

Pressure given to a cylinder for convenience of naming. It is not always the same as the working pressure (rated pressure) that guarantees performance under the specified conditions.

Maximum allowable pressure

The maximum allowable pressure generated in a cylinder. (surge pressure, etc.)

Proof test pressure

Test pressure against which a cylinder can withstand without unreliable performance at the return to nominal pressure.

Minimum operating pressure

The minimum pressure that a cylinder placed horizontally without a load can work.

Notes)

- The cylinder with 32 mm bore conforms to JIS B8367-2.
- Rod diameter and port Rc conform to JIS B8367. (not included in ISO 10762 standards for body)
- Working temperature range depends on the seal material. For details, refer to the selection materials.
- In case that the lock nut is attached to the piston rod end thread, increase the thread length (dimension A).
- Mounting dimensions of the mounting style CA differ from the specifications.
- As for the mounting style EA with 63 mm bore, only the length of centering guide (dimension F) differs from the specification.
- Conex, material of the boots, is the registered trademark of Teijin Limited.

- The following models and mounting dimensions are not specified in JIS B8367-5.
  - Double rod types (100H-2D and 100H-2RD)
  - Cutting oil proof types (100HW-2 and 100HW-2R)
  - Mounting styles SD, FA and FB

Notes)
- For the sensors without a protective circuit, be sure to provide a protective circuit (SK-100) with the load when using any induction load (relay, etc.).
- The output logic of AX and AZ135CE is B contact. When the piston is detected, the sensor contact turns off (the lamp turns on).
- For the details of sensors, be sure to read the sensor specifications at the end of this catalog.
- We recommend AND Unit (AU series) for multiple sensors connected in series. For details, refer to AND Unit at the end of this catalog.

ϕ80	30	55	140	190
ϕ100	25	50	150	200
ϕ125	20	50	160	210

- The parenthesized values in the ϕ32 row are the minimum strokes when the rod side detection sensor and the cap side detection sensor are mounted on the same surface.

Notes)
- The minimum stroke is identical whether only one sensor (one-side stroke end detector) or two sensors (double end detector) mounted.
- For the TC style, the values are applicable when the TC accessory is in the center, and the sensor can be installed to any of the rod and cap sides.

✪ Port position and cushion valve position

EB	A	B	A	B	A	C
EA·TA	A	C	A	C	A	B

- The standard positions of port and cushion valve for styles other than EA, EB and TA are Ⓐ and Ⓑ, respectively. When modifying the positions, enter the symbol shown in the dimensional drawings.

Cap side port and cushion position change specification symbol

Position specification : PC−BA
Rod side port and cushion valve positions

- Order symbols and port and cushion valve positions shown above are applicable to EA, EB and TA styles. When modifying the position, specify the position on the rod and cap sides. As for the TA style rod cover, neither port nor cushion valve can be provided on the Ⓑ or Ⓓ side. As for the EA style rod cover, cushion valves cannot be provided on the Ⓑ or Ⓓ side. As for the EB style cap cover, cushion valves cannot be provided on the Ⓑ or Ⓓ side.
- In case that the cylinder is not equipped, the cushion valve position is "O".
- If the ports are located on the Ⓑ or Ⓓ side of the LA style cylinder and general piping joints are used, they may interfere with the cylinder mounting bolts.
- Air vents are located on the same side as the cushion valves. If the cylinder has no cushion, they are located on the Ⓑ side (or Ⓒ side in case of the EA or TA style rod cover).

✪ Port G thread type

- For the port G thread type, add "G" ahead of the port position symbol.

(Example)
100H-2 2CA50BB100− G A B
Port G thread type
Port position
Cushion valve position

Note) For cylinders with 32 mm bore, the rod cover size is changed. For details, contact us.

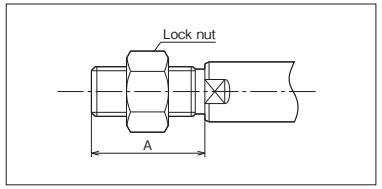
✪ Notes on ordering cylinder with lock nut

● The rod end thread length (dimension A) is longer when a lock nut [K] is attached to the rod end.

(Example)

100H-2R 2LA50BB200−ABAH2−[K]

Long thread with lock nut



Dimension A without lock nut
A=28

↓

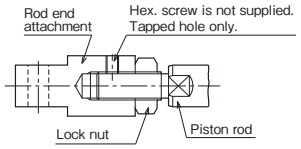
Dimension A of long thread with lock nut
A=40

Note) When a lock nut is attached to the rod end, dimension A must be equal to or longer than that of the long thread with lock nut.
For details, refer to "Thread length of rod end with lock nut."

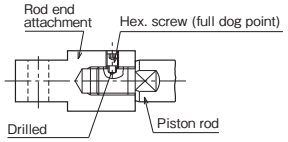
✪ Delivery of rod end attachment (T-end or Y-end)

A delivery method for a cylinder provided with a lock nut and a rod end attachment differs from that for a cylinder provided with a rod end attachment only (without a lock nut). For details, refer to the dimensional drawings of rod end attachments.

● When the lock nut and rod end attachment are additionally ordered



● When only the rod end attachment is additionally ordered (without lock nut)



✪ Semi-standard range

- Change in piston rod end (dimensional symbol: WF (W), A, KK)
- Plated cylinder tube (hard chrome plating thickness: 0.02 mm)
- With boots

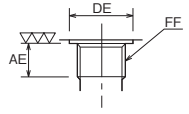
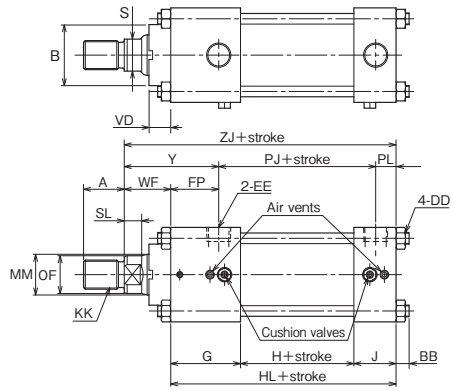
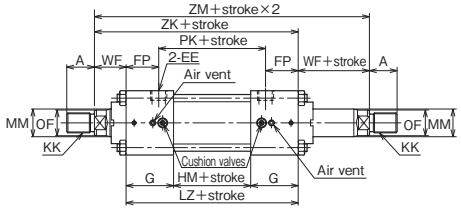
Port G thread type





- The positions of cushion valves and air vents depend on the cylinder bore.
- Rod end thread length (dimension A) is longer when a lock nut is attached to the rod end. Refer to "Thread length of rod end with lock nut" in "Rod End Attachment."
- When using the SD style, be sure to see "4. Mounting" in "Precautions for use" at the beginning of this catalog.
- If you want to change the rod protrusion length, specify dimension WF.

Double acting double rod



- The distance between the covers of the double rod cylinder is longer than that of the single rod cylinder by 10 mm.

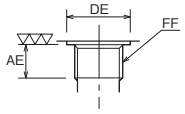
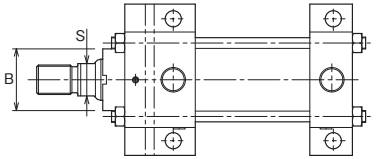
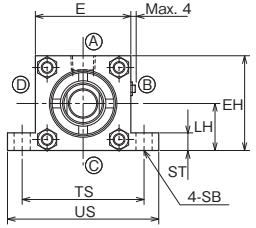
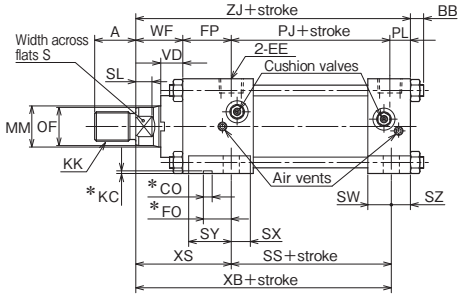
Port G thread type



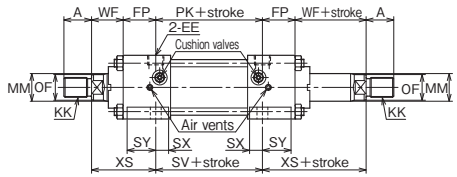






- The positions of cushion valves and air vents depend on the cylinder bore.
- Rod end thread length (dimension A) is longer when a lock nut is attached to the rod end. Refer to "Thread length of rod end with lock nut" in "Rod End Attachment."
- Notes on mounting bolts
  Use hex. socket head cap screws as the mounting bolts for cylinders other than the 32 mm bore cylinder.
  If hex. head bolts are used, bolt heads may interfere with the cover and spot facing, causing mounting failure.
- *CO, FO and KC are key groove (option) dimensions.
- If you want to change the rod protrusion length, specify dimension WF.

Double acting double rod



- The distance between the covers of the double rod cylinder is longer than that of the single rod cylinder by 10 mm.

Notes on LA style with ports on lateral side (Ⓑ or Ⓓ)

- The port G thread type is not the standard type. (The position on Ⓐ or Ⓒ is the same as that of the standard type.)
- The port position deviates from the cylinder center by dimension LE.
- Take into consideration the interference of the piping and fitting with the mounting bolts (including handling of tightening tools), referring to the table on the right.
- When the cylinder bore is 32 mm, mounting with hex. head bolts is recommended.
- When the cylinder bore is 40 mm or more, hex. head bolts cannot be used. (because their heads interfere with the cover and spot facing). In such a case, use hex. socket head cap screws, and mount the cylinder by tightening nuts on the back of the mounting plate (refer to the drawing on the right).

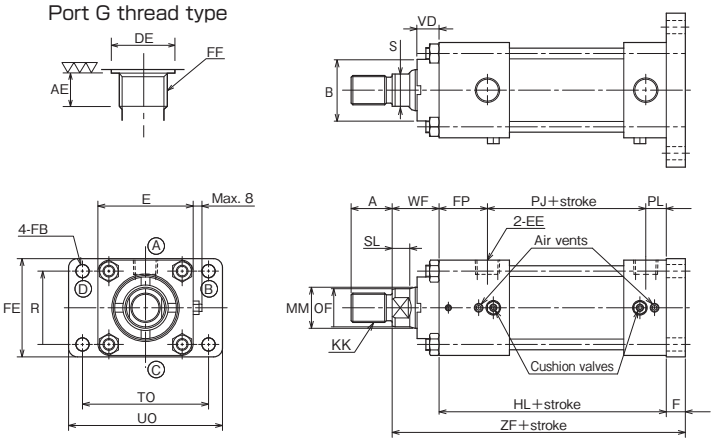
FB

100H-2 2 FB Bore B B Stroke – A B

Port G thread type



- The positions of cushion valves and air vents depend on the cylinder bore.
- Rod end thread length (dimension A) is longer when a lock nut is attached to the rod end. Refer to "Thread length of rod end with lock nut" in "Rod End Attachment."
- If you want to change the rod protrusion length, specify dimension WF.

- For the G thread type, the FB accessory may interfere with the fitting when the fitting is screwed into the rod side port, depending on the fitting type. Check the size of the fitting to be used referring to dimension PL.
  Consult us if any interference occurs.

●Delivery of rod end attachment (T-end or Y-end)

① When the lock nut and rod end attachment are additionally ordered
The rod end attachment and lock nut are temporarily assembled to the piston rod for delivery. Since the lock nut is not tightened, tighten it after adjusting the position of the rod end attachment.
No hex. screw is supplied.

② When only the rod end attachment is additionally ordered (without lock nut)
The rod end attachment is tightened to the piston rod, and a drill hole is made on the piston rod for delivery.
If the drill hole is unnecessary, give us such instructions.

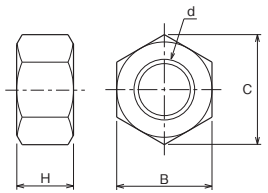
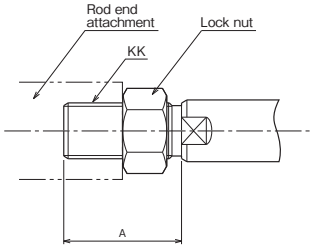
●Lock nut



●Thread length of rod end with lock nut



The standard fitting length of the rod end attachment and piston rod is about 80% of the thread diameter. When using a lock nut, it is necessary to increase the thread length (dimension A) as shown above.
If you order a cylinder with a lock nut (symbol: K), the thread length (dimension A) is as shown on the next page.

Change of Rod End Shape Rod B (For other shapes, consult us.)

■You can specify the shape and dimension of the rod end as shown below using the semi-standard symbols and dimension symbols.
(No need to specify the dimension symbol if you order a cylinder with the basic dimension. Specify only the semi-standard symbol.)

How to order: Series | Model number | −× | Semi-standard symbol | Dimension symbol (Specify only when the dimension differs from the basic dimension.)

Semi-standard symbol : A01 (KM and KP need to be specified as a pair.)

Applicable dimension symbols : A | KM | KP | W | WF

φ32 to φ80 : 2
φ100 to φ125 : 3
Within the basic dimension (See Notes.)
A dimension over the basic dimension goes for 'A00'

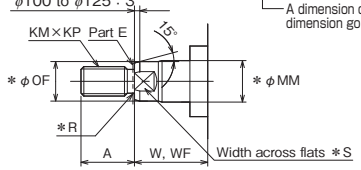

Table of Basic Dimensions (=Standard dimensions of 100H-2)

Bore	A	KM	KP	＊MM	＊OF	＊R	＊S	W (FA)	WF (Others)
φ32	18	14	1.5	φ18	φ17	1	14	35	25
φ40	22	16	1.5	φ22	φ21	1.6	17	35	25
φ50	28	20	1.5	φ28	φ26	1.6	22	41	32
φ63	36	27	2	φ36	φ34	2	30	48	34
φ80	45	33	2	φ45	φ43	2	38	51	35
φ100	56	42	2	φ56	φ54	2	50	57	41
φ125	63	48	2	φ70	φ68	2	60	57	41

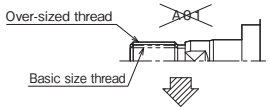
Usage

■To change the dimensions of the rod end shape of 100H-2

Notes

■When the dimensions are identical to the basic dimensions, the semi-standard symbol is unnecessary because the basic dimensions are the same as the standard dimensions.

■When a thread size that differs from the basic dimension is specified, the part E will not have a contact area.
Therefore, the rod end will have the shape of 'A00'.
In this case, the semi-standard symbol must be 'A00'.
('A01' cannot be used.)



Use symbol A00 and specify the dimensions.

Examples

●Bore: 40 mm, rod B, rod end thread: M16×2, WF=80 mm
(Order)100H-2 1CA40BB250-AB-X A01
KM-16, KP-2, WF-80
(Fabrication) Rod end shape A=22, KM=16, KP=2, WF=80, φMM=φ22, φOF=φ21, R=1.6, S=17

●Bore: 100 mm, rod B, rod end thread: M45×1.5
'A01' cannot be used. Refer to 'A00'.

Semi-standard symbol : A00 (KM and KP need to be specified as a pair.)

Applicable dimension symbols : A | KM | KP | W | WF

φ100	75	48	1.5	φ56	1.6	50	57	41
φ125	95	64	2	φ70	2	65	57	41

Usage

■To specify a thread size different from the basic dimension of 'A01'
■To conform to the rod end thread pitch of the rod B of TAIYO 70H-8

Notes

■The basic dimensions A, KM and KP of 'A00' differ from those of 'A01'.
When using symbol 'A00' to specify a thread size different from the basic dimension of 'A01', specify dimension A at the same time.

Examples

●Bore: 63 mm, rod B, with basic dimensions of 'A00'
(Order)100H-2R 2FA63BB300-BC-X A00
(Fabrication) Rod end shape A=45, KM=30, KP=1.5, W=48, φMM=φ36, R=1.6, S=30

●Bore: 100 mm, rod B, rod end thread: M45×1.5, with other standard dimensions of 100H-2 (=basic dimensions of 'A01')
Since the thread differs from the basic dimension of 'A01', the shape must be 'A00'.
(Order)100H-2 2CB100BR500-AB-X A00
KM-45, KP-1.5, A-56
(Fabrication) Rod end shape A=56, KM=45, KP=1.5, WF=41, φMM=φ56, R=1.6, S=50

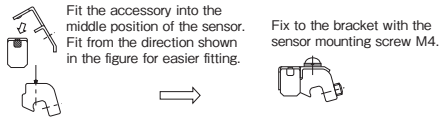
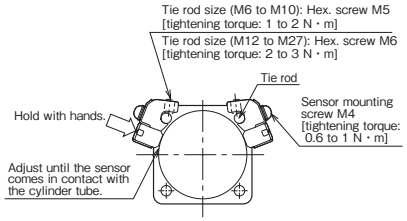
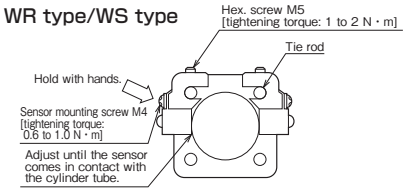
Setting method of sensor detecting position

AX type/AZ type





WR type/WS type



1. Loosen the two hex. screws with a hex. wrench, and move them along the tie rod.
2. Adjust the detecting position (for the 2-LED type, the position where the green lamp lights up) 2 to 5 mm (about half of the operating range is appropriate) before the required position where the sensor indicator lamp starts to light up (ON). Then, gently hold the top of the sensor so that the cylinder tube contacts the detecting face of the sensor, and clamp the hex. screw to an appropriate tightening torque.
   Note) Inappropriate tightening torque may cause the off-center of the sensor position.
3. The indicating lamp lights up when the sensor is set to the ON position.
4. Sensors can be mounted to any of four tie rods and on the most suitable position depending on the mounting space of the cylinder and wiring method.
5. Mount a sensor to the most suitable position to detect the stroke end with the "sensor mounting dimension" (dimension UX).

Notes on assembly

Tightening of tie rods

- Apply molybdenum paste to the nut bearing surfaces and thread surfaces before tightening the tie rods. Tightening with dry surfaces may cause failure in appropriate tie rod axial tension.
- DO NOT tighten only one tie rod at a time, but tighten them gradually in the order shown in the right diagram. Uneven tightening of the tie rods can cause operation failure or stick-slip.
