TANNERY MACHINES AND SPARE PARTS

## Fleshway D-2

---

customers.

FLESHWAY D-2 has been conceived to move the remnants of fleshing far away from the fleshing machine, and precisely 150 metres far, without problems like heights, bends, etc.

Thanks to its noticeable flow, FLESHWAY D-2 is able to follow the production of a through-feed fleshing machine or of two hydraulic fleshing machines at the same time and, most important, without need of water during the fleshing phase.

The maximum flow is about 150 lt/min. The dimensions are: mm. 2100 × 600 × 600.

The machine can be modified to press shavings, producing some disks that can be more or less compact depending on the requests of the
