TANNERY MACHINES AND SPARE PARTS

## Shavepacker D-3

SHAVEPAKER D-3 was conceived to compress shavings to 80% of their volume.

Thanks to small size and large mouth, the machine can be used at conveyor belt end.

Production capacity can be changed according to customer's requirements. On average it can process 1800 kg of material per hour.

At the end of the operation shavings are turned into a compact cylinder, easier to handle and transport.

Overall dimensions are: mm 2100 × 600 × 940 h

Ø Pistons	Working width [kg/h]	Installed power [KW]
300	1200	11
400	1800	11
