TANNERY MACHINES AND SPARE PARTS

Vibration stacking machines conveyor belts

We supply all the original parts of any kind of vibration stacking machine. Particularly we suggest you to try our own range of lycra conveyor belts. They are supplied in three types:

- **type "PE"** for vibration staking machines like "Cartigliano". They are light, elastic and fully compatible with the machine. We supply belts for any kind of widths: from 1600 mm to 3200 mm, with one, two or three beating jaws. Also included the thermojoinable rope for passing on the edge;
- **type "SR"** have a lighter weight than the belt above and it is reinforced by rubberised strips that increase the leather's take in of the machine;
- **type "FR"** similar to the belt type "SR" but fully rubberised; suitable for heavy weight leathers.

For each texture we suggest to apply a rubber glue on the repaired joints: this operation will guarantee a longer lifetime of the belts and sewing.
