

NANO SAND IRONING

NANO SANDING

Working roller is pressed by 3 pressure rollers

2Big rollers pressed by dually hydraulic or pneumatic cylinders which are adjustable independently and a system researched and projected to avoid loose grain even for soft kind of leathers.

This system allows the rollers' moving freely and sensitively during working.

Pneumatic cylinders adjusted by pressure regulator can give uniform ironing effect on the leather

This system is fantastic to work in low pressure range.

Roller Exchanging System
