

What's New?

Ironing and sanding processes are possible with one machine.
1st and 3rd rollers are pressed by dually hydraulic or pneumatic cylinders. Pneumatic cylinders adjusted by pressure regulator can give uniform ironing effect on the leather.

What's Nano Sand?

Natural shining effect on the leather without diffused reflection.
Covering small defects, for example small wrinkles, scratches and phenol marks.

What's Different?

No loose grain during working caused by spreading system and our new hinge system of hydraulic cylinders which is researched and projected.
It is possible to work from natural shine to high gloss and you can get uniform glossing effect on the leather after working.

What's Interesting?

Kiss plating effect for natural shrunken leather or embossed leather utilized by pneumatic system.
Smooth touch after working caused by 3 pressure rollers and keep softness even after two or three times ironing.
