

Realization of tasks previously difficult to automate

Grippers of different sizes and finger shapes can be used for "hold", "pinch" and "pick up".
The line-up is available in a variety of sizes and shapes to best suit the workpiece.

Feeding to packaging machine/weighing scales

The robot picks up workpieces on the conveyor that are recognized by vision and feeds them to the packaging machine. Use of SOFTmatics™ makes it possible to pick up foodstuffs of various sizes and shapes, such as chocolate.

Packing onto trays

A robot picks up foodstuffs from the conveyor and places them on trays. SOFTmatics™ uses flexible elastomer and decompression drive, making it gentle and safe for the work environment, and when used with a collaborative robot, workers can feel safe beside the robot.
